# Burndown Chart

MindSage Burndown Chart

We have started all our sprint 2 tasks and made many pull requests, tweaking code, and fixing bugs. Unfortunately, due to time constraints and the end of the semester, we could not finish up all the features. Nevertheless, we have finished some like making UI enhancements to log in and journal page along with adding more security features like email verification.

The previous sprint had 18 points compared to the 54 points in sprint 2. We were able to finish that one quicker because the scope wasn't as large. Additionally, the timing was better as it wasn't the end of the semester as sprint 2 is. Because of time constraints, conflicting schedules, and other responsibilities, it was harder to keep track and finish everything.
